

ORION™ II CT CVC

CVC Access with
Power Injectability

HEALTH LINE
MEDICAL PRODUCTS

Why choose a CT CVC?

Using an indwelling central line indicated for pressure injection of contrast media, negates the need for another type of venous access. This streamlines the scan process and saves crucial time for you and your patients.

The Orion™ II CT CVC catheters are power injectable and intended for short term infusion therapy. Available in a variety of sizes and lengths, clinicians have the options necessary to meet the patient's needs for central vein access.

Indications

Blood Letting
Fluid Monitoring
Multiple Infusions
Poor Peripheral Access
Injection of Contrast Media
Necessary Extended Therapy

Features and Benefits

Available in a Variety of Lumen Configurations - Offered in a single, double, and triple lumen.

Soft Flexible Tip - Reduces vessel irritation during insertion.

Reverse Taper Design - Strengthens the external portion of the catheter.

Simple Grip Luers - Easy on gloves and color coded for multiple treatment options.

One Piece Cannula Construction - No bonds or welds helps to ensure catheter will not break.

CVP Monitoring - ORION™ II Power CVCs are indicated for central vein pressure monitoring.

Polyurethan Catheter Construction - Provides radiopacity, durability, and strength.

Maximum Injection Rates - Allows for the injection of contrast media at rates up to 5 ml/sec for CECT scans.

Simple Grip Luers

are easy on gloves and maintain strength and crack resistance

Low Profile Hub
allows for suture or sutureless securement

Easy, Legible Identification
on clamps and extensions. Indicating power injectability and maximum pressure

Orion™ II CT CVC Kit Configurations
