ProV Midline ST is a Midline catheter intended for short term (less than 30 days) peripheral access to the venous system for the purpose of intravenous therapy, medicines, and blood products. The smooth, atraumatic tipped cannula allows for smooth insertion and helps to avoid trauma to the vessel.

A bridge between a short PIVC and a traditional Midline, Health Line's **ProV Midline ST** is a short midline catheter, a suitable choice for patients requiring longer cannulation than achieved by a short PIVC, and whose treatment regimen includes frequent blood draws, power injection cycles, and multiple infusions within 30 days.

Features and Benefits

Power Injectable: Allows for the power injection of contrast media.

'V' Tipped Catheter Design: Aides in the transition from wire to vessels while helping promote consistent aspiration and flow rates.

Seldinger Technique: Facilitates a simple and straightforward, OTW insertion.

Multiple Sizes: The ProV Midline ST is available in multiple sizes to accommodate various vessel sizes and aid in patient comfort.

Multiple Uses: Designed to be used for infusion, intravenous therapy, and blood sampling.
